DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: In claim 1, line 3, the recitation "(LIC element)" should be changed to --(L/C element)--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Koyama et al (US Patent 5,940,041).

Koyama et al disclose, in figure 15, an antenna device comprising a slot line element 212, and a tuning capacitor 221 attached to the slot line element to match a resonant frequency of the antenna.

4. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohoka et al (US Patent 6,281,854).

Application/Control Number: 10/598,120 Page 3

Art Unit: 2821

Ohoka et al disclose, in figure 7, an antenna device comprising a slot line element 40, and a matching capacitor 221 attached to the slot line element to match a resonant frequency of the antenna.

5. Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Smith et al (US Patent 7,123,200).

Smith et al disclose, in figure 1, an antenna device comprising a slot line element 15, and a plurality of capacitors 19 attached to the slot line element to match a resonant frequency of the antenna, see column 2, lines 5-10.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 2, 3, 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al or Ohoka et al, or Koyama et al.

The patents to Smith et al or Ohoka et al or Koyama et al, described above, differ from the claimed invention because they do not teach the L/C element that moves along the slot line or attaches and detaches to the slot line. However, it would have been obvious to a skilled artisan to move the L/C along the slot line or attach and detach the L/C element for the purpose of obtaining a desired matching resonant frequency.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan Ho whose telephone number is (571) 272-1822. The examiner can normally be reached on M-F (8:00AM - 5:00PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacob Y. Choi can be reached on (571) 272-2367. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
